Our Mission and Vision

To innovate, design and manufacture prefabricated cleanroom units timely and efficiently off-site and to introduce these prequalified systems into the customer site quickly without significant resources and on-site interruptions in order to get needed medicines to patients. To respond to customer requirements with speed, diligence and dedication, thereby achieving the best possible cleanroom solution with the most attractive total cost of ownership to enable affordable treatments for every patient. To form alliances and partnerships that add value for our customers. Such value may be shorter time-to-run facilities, turnkey solutions, scalable cleanroom space without interruption of existing processes and/or extended usable life of our cleanroom product to empower supply assurance for the patient.

Focus

We are always focused on our ultimate customer – the patient. We know that the patient relies on high quality work and timely deliverables. We strive to create cost efficient and flexible solutions for the industry to ensure the availability of affordable medicines.

Integrity

We believe that integrity of the highest standard is critical in every facet of our business. Our customers trust us with their requirements. We work relentlessly to fulfill those requirements while employing the highest ethical and quality standards, always with the patient in mind.

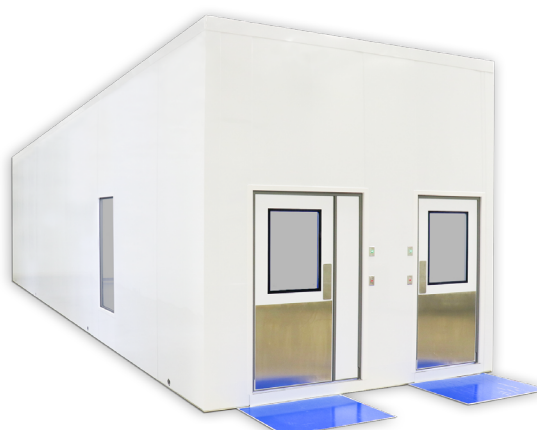

Team

We work as a cohesive team, not just within our company, but with our customers, business partners and suppliers. Their tasks are our tasks. Their goals are our goals. And their success is our success. We recognize that true success can only be achieved as a team, utilizing each member's unique core competences to achieve the final result – saving lives.

Prefabricated Cleanroom PODs

G-CON delivers complete, prefabricated biopharmaceutical cleanroom environments for uses ranging from small labs to commercial scale production platforms. Our cleanroom POD designs allow for rapid delivery to meet changing capacity demands.

standardPOD is an off-the-shelf cleanroom, with delivery in as little as 3 months. Our standardPOD offers six configurations to choose from and is the top choice for readily available, quality standardized cleanrooms.

mobilisPOD is a readily available, mobile and scalable laboratory solution, allowing fast track deployment and testing capacity in almost any location and environment.

megaPOD consists of high bay POD units for oversized equipment. Ballroom configurations are available.

POD System integrates multiple connected units to accommodate larger footprint installations with suites, airlocks, and corridors.

Top Applications

Cell Therapy

Aseptic Filling and Formulation

Vaccines

mRNA Processes

Clinical through Commercial Scale

Monoclonal Antibodies

Gene Therapy/ Viral Vector

Oral Solid Dosage

Continuous Manufacturing

Other Products and Services

G-CON is now able to manufacture and supply its own cleanroom wall panels, ceiling systems, doors and other cleanroom components. This not only provides supply chain assurance of quality, cost and delivery of these critical components used in the manufacturing of G-CON's PODs, but also expands our portfolio to provide our clients with a broader range of cleanroom solutions to meet their facility project needs.

G-CON Building Solutions provides host facility project management solutions to pharmaceutical and biopharmaceutical clients to simplify customer cleanroom projects and provide project completion in a more timely and cost-efficient manner. Global regulatory requirements, design & permitting, contractor and vendor selection, equipment purchase, and validation are just a few elements in a typical project. Regardless of the size of the client, G-CON Building Solutions can manage all of these elements so they can focus on their core business objective – producing treatments for patients.

The G-CON smartPOD platform provides clients with a suite of automation and controls options for their cleanroom infrastructures including but not limited BMS, EMS, equipment monitoring, and historian integration, both inside and outside of PODs. G-CON's in-house automation team has the experience, capabilities, and know-how for providing a comprehensive turnkey solution for any facility project from design through qualification.

To learn more, email sales@gconbio.com

Following project-close out, the G-CON Service team will ensure that client's PODs continue to function as intended. Service offerings include preventative maintenance plans, spare parts, NEBB certified TAB services (Testing, Adjusting, and Balancing), and same day support. The Service team also receives and addresses all warranty requests. The Service team manages data from these activities so that our products are continuously improved across all areas of performance.
